Q67- Are we allowed to deploy the transformer base outside the departure area, without coming into contact with the floor, once the fans have been turned on?

~~Yes~~. The answer is now "No". Allowing the transformer base to be deployed outside the departure area appears to be an interesting idea that would allow contestants to come up with a greater range of solutions to the challenge; but, it goes against several contest rules and answers that we have already posted. So, we apologise for the inconvenience, but no.

Q73 If a part of the vehicle falls off as it makes its way around the track, what impact does this have on the 1/8th lap scoring?

N will correspond to the number of laps completed by the vehicle BEFORE the part breaks off.

This will also apply to value "t" in the scoring formula; the best "t" obtained BEFORE the part breaks off is the one that will be used. See also Q78.
